Gas and vapour monitors development, manufacture and service

Műszer Automatika Kft. has been developing, manufacturing, gas and vapour monitor equipment and giving service support for more than 25 years. These gas monitors are designed for the protection of life and property in indoor and outdoor areas where leakage of explosive or toxic gases, vapours can cause explosion or poisoning. The gas monitors measure and display the vapour or gas concentration and can be used for activating alarm signals and necessary control.

Detectors

Detectors can measure the concentration of explosive or toxic gases and vapours as well oxygen and carbon-dioxide.
